STEEL WIRE ROPES
LIFTING SYSTEMS
BELOW-THE-HOOK
EQUIPMENT

PRODUCTS

- Steel wire ropes
- Electric, manual and air hoists
- Jib cranes
- Light crane systems
- Aluminium gantry cranes
- Wire rope winches
- Vacuum lifters
- Wire rope slings and accessories
- Chain slings and accessories
- Eye bolts
- Lifting points
- Web and round slings
- Corner protections
- Lashing systems
- Lifting clamps
- Magnetic lifters
- Lifting beams

industria

Intuition, passion, experience and tenacity: all success stories contain these ingredients and that of Mauro and Roberto Ferrari is no exception. Their journey began in 1994, when the two brothers, experts in the construction and industrial machinery sector, chose to join forces by founding Ferrari Macchine Edili. They decided to look for high quality products present on the market, offering their expertise to direct the customer to the best possible choice while ensuring timely and accurate assistance. Because a stoppage on site even for one day can lead to big problems.

In 2012 Ferrari Macchine Edili became an SA (joint stock company), confirming itself as a point of reference for the Italian part of Switzerland, in the construction, industrial and artisan sectors. An entrepreneurial growth that saw the birth of Ferrari Industria in 2017, thus expanding its business offer to the lifting sector. A commercial and technical team able to offer the best products and solutions for the design and construction of standard and specialist systems.

HOOK AND BELOW-THE-HOOK CHECKS

The vast world of lifting is appropriately regulated by laws and standards that, in order to ensure worker safety, call for controls, maintenance and periodic checks of both cranes and so-called below-the hook equipment. Under the spotlight are all those devices that are used together to handle all types of loads. Those most subject to checks are chains, cables, balancers, pins, lifting hooks, welding and structural parts. Thanks to a specialist team of technicians, Ferrari Industria SA offers an all-round service as well as a checking service for electric hoists, cranes and related components. Specifically, it carries out annual and quarterly checks, on-site maintenance of parts subject to wear and the drawing up of checking registers, also required by current legislation.

The checks are strictly carried out in "non-destructive" manner: the verification tests have been designed to highlight any anomalies or defects with the examined part, while preserving its integrity.

EXCLUSIVE DEALERS FOR SWITZERLAND

The close collaboration with Misia Paranchi S.r.l. in addition to standard products, offers the maximum know-how in the construction of specialist hoists and trolleys.

The agreement with Fas S.p.A., the largest Italian company in the lifting field, guarantees our products are available in 24 hours.

OMIS designs and manufactures single girder and double girder bridge cranes all based on the best general and specific technology available and state-of-the-art engineering and design.

ASSISTANCE AND MAINTENANCE

- Scheduled operations to ensure the conservation, efficiency and safety of the systems
- Periodic checks of lifting systems
- Periodic checks of below-the-hook equipment and accessories
- Annual checks of PND lifting hooks
- Extraordinary checks and residual life cycles
- System re-certification
- System automation
- Modifications and transformations (inverters, load limiters, radio controls, etc.)
- Gauge and system capacity variations
